Speed of light

Telus is upgrading Merritt, and over the next few months, more than 90% of homes and businesses will have direct access to their new fibre optic network. It is made from flexible, transparent fibres of glass that are slightly thicker than a strand of hair. These fibres transmit data as pulses of light, which allows large amounts of information to be sent to your home or business at close to the speed of light.

It is their fastest internet yet, with download speeds of up to 150Mbps and upload speeds of up to 30Mbps (you can download a 3.5 GB HD movie in as little as 4 minutes, and share 100 of your favourite photos in just 2 minutes.)

This project represents a major technological advancement and economic opportunity for the area. Access to fibre technology will help spur growth and create opportunities. FMI visit telus.com/merritt
